PAINT PROTECTION FILM

IS COMPLETELY

Worth
The Investment

You love the way a new car or fresh paint job glistens in the sun. It's so much fun to jump in for an afternoon cruise or morning commute.

But nothing wants to make you put your fist through a wall more than when you see that beautiful paint scratched or marred unnecessarily by road debris.

It feels like good money down the drain - and beyond that, you just don't feel the same sense of swelling pride when you climb into your vehicle.

But it doesn't have to be that way.

Paint Protection Film (PPF) is a crystal clear, energy absorbent film that acts like a shield of armor for the paint on your vehicle.

Let's take a look at how paint protection film can help protect your vehicle and have you cruising down the road in a like-new car for years!

1 - Help Stop Exterior Damage

We list exterior protection as the first benefit of paint protection film because this is its number one job.

Stones, sand, tar, and other road debris wreak havoc on your car's paint. If that's not enough; acid rain, bugs, and bird dropping will finish the job.

However, paint protection film (sometimes called clear bra) helps protect your car's paint job.

How does it do it?

Paint protection film is literally a polyurethane film that adds an extra layer of protection to your vehicle.

It is formulated from a combination of advanced elastomeric polymers that prevent the film from discoloring, yellowing or hazing.

And it always fits your car perfectly - meaning you are covered from front to back.

It is sized and cut from a database of precision templates specific to your vehicle. At Sun Stoppers, one of our professionally trained installers then puts the PPF on your vehicle.
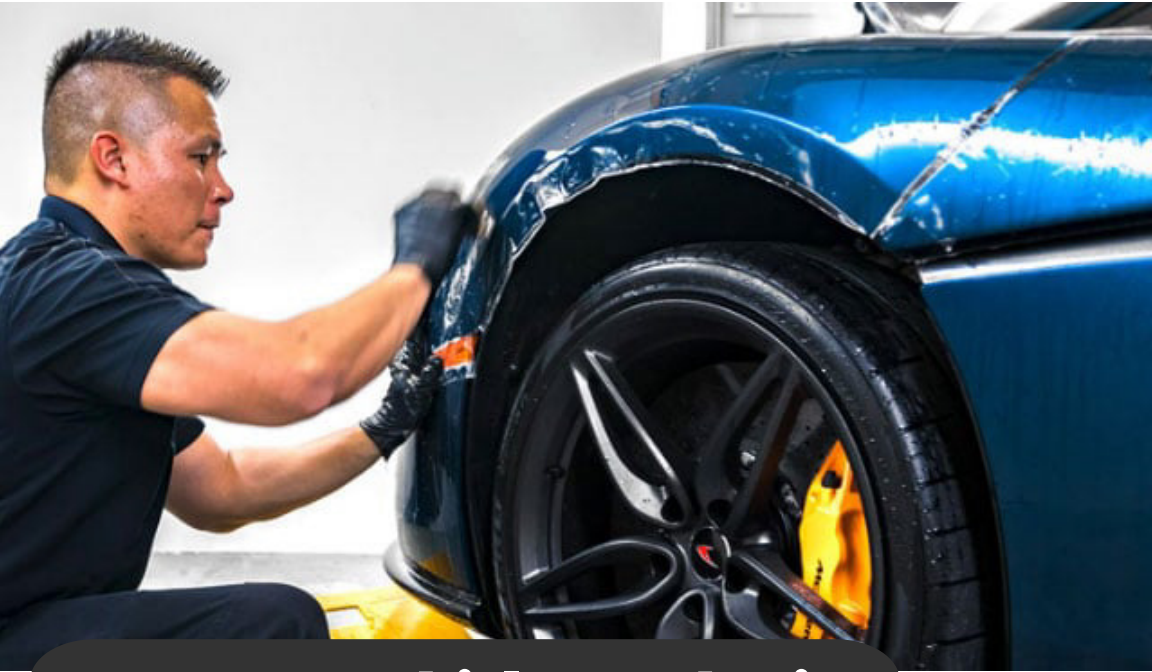

2 - Help Self Heal Scratches

This is where XPEL's PPF begins to take things to the next level.

Not only does this top-of-the-line paint protection film guard against everyday threats like gravel and bugs, it also self-heals when it is scratched.

That's right – you can take a wire brush (up to 6 mil) to paint protection film, and then pour warm water on it and watch the scratches disappear.

Amazing!

3 - Boost Vehicle Aesthetics

There are numerous ways of protecting a vehicle. For example, you could weld a guard to the front of your vehicle to fend off animals, or coat your vehicle with a layer of tar to fend off scratches and dings.

However, those fixes wouldn't look very good.

On the other hand, paint protection film enhances the aesthetics of a car as soon as it is applied.

You can't see the film with the naked eye – but you can tell that it makes your vehicle glisten like new!

You can also get unique paint protection films that give your vehicle an attractive finish. Take for example the XPEL Stealth PPF. This allows you to create a whole new attractive matte finish for your vehicle.

4 - Help Save Money On Expensive Vehicle Repairs

Have you ever needed to repaint a vehicle?

If not, count yourself lucky.

While the costs to paint a car varies on many factors, you can expect to pay $5,000 on average for a high-quality paint job.

In other words:

You want to avoid repainting your car if at all possible.

And here's the thing:

Every time your paint is punctured – even if it's just a tiny chip from a piece of gravel – the protective barrier is broken and an area is created where rust and other damage can set in.

That's why making the investment in paint protection film for your car can save you tons of money in the end.

Conclusion

Whether you want to drive with pride, or simply protect your investment by avoiding paint repairs, paint protection film is the way to go.

At Sun Stoppers, we offer paint protection film services as well as other methods of protecting your vehicle like window tinting, and ceramic coating. No matter what your needs are, we strive to provide excellence in quality and service.
