What does almost every office space, or commercial building have in common?

Windows - and lots of them!

Of course, the resulting view and atmosphere is often stunning. But the energy bill - well, that's stunning in a not so pleasant way.

And if your screen is situated near a window you know all too well the frustration of sun glare.

Thankfully, there's a way to enjoy natural light and beautiful views in your office without getting rid of all your windows.

The solution - window tint!

That's right! Window tint can be placed on a lot more than vehicle windows. In fact, it can be revolutionary in your office space.

Let's find out how!

# 1. Enjoy More Consistent Temperatures

Do you have one employee fanning themselves with a scrap piece of paper while another tries to rub the goosebumps out of the arms?

If so, it may not be a matter of personal preference in temperature.

Big office spaces are notorious for inconsistent heating and cooling, and the result is various temperatures throughout the building.

Thankfully, window film blocks up to 98% of the solar energy, so your office can stay cooler during the hottest months of the year.

Window film also retains more heat in the winter, meaning your office space will be more comfortable all year round.

## 2. Tinting Your Windows With Security Film Can Help Stave Off Everything

From intruders to natural disasters such as storms, fires, and earthquakes.

In these events, the security film will help hold the glass together longer, thus decreasing the chance of injury.

In the event of an office invasion, it would take more effort for the intruder to breach the glass and gain entry, giving you more time to react and call the authorities.

## 3. Save Money On Utility Bills

Another major pro or benefit of office window tinting is that when installed correctly, the right window film can help you save money on your energy bills by insulating your windows.

In the heat of the summer, tinted windows will reject more of the sun's heat, thus reducing the amount of air conditioning needed to achieve indoor comfort.

Films can also help keep heat inside, making it warmer in your office during the colder winter months, which saves on heating costs. The result is a reduction in energy use, which helps cut down on costly utility bills.

## 4. Reduce Screen Glare And Eye Strain

Have you ever been working on your computer, or watching your favorite sports team go for the big win with your buddies, only to find it hard to see the screen?

The glare of the sun's rays on electronic devices can make it difficult to decompress and enjoy your online shopping experience or the most memorable moments of your favorite film - not to mention get work done at the office!

While solutions such as curtains and blinds are a preventive measure, they must be closed to block out the sunlight, leaving you in the dark.

A major benefit of window tinting is that it allows for greater enjoyment of these activities by reducing the sun's glare while still allowing natural light into your home.

## 5. Reduce Interior Fading

It's maddening to discover that your valuable furniture and floors have faded due to harsh ultraviolet rays that penetrate glass.

Irreplaceable artwork can also be destroyed even in partial sun exposure.

Thankfully, window film reduces fading up to 99% by blocking invisible Ultraviolet Rays (UVA, UVB, & UVC)

## 6. Block Harmful UV Radiation

Amir Khoshnevis, Doctor of Optometry, recommends that all his patients tint the windows of their home and office.

Why?

Because he has seen first hand that harmful UVA and UVB radiation can cause cancer, melanoma, cataracts, and degenerative eye diseases.

XPEL Prime window film helps solve this problem by protecting you and your employees from up to 99% of Ultraviolet Rays.
